Abstract: The libraries have information such as books, reference books, encyclopedias, magazines, journals, inventions, documents, files, gadgets, maps, e-sources, database research paper, survey reports, progress reports, documentary information, government and private organization reports, papers etc. This information is provided to the researcher by Librarian. Researchers can do better research using this information source. An excellent research contributes valuable to the development of the advanced society. What is the need of library services in the entire process of research in the present article? What library services are available for good research? And how can be used. Its information has been given. Thus, library services and e-library services and Librarian are a basic requirement for good research.

Key word: Librarian, library services, Research processing, E- Resources, good Research,

(1)   Introduction:

The libraries have books, reference books, encyclopedias, magazines, journals, inventions, documents, files, gadgets, maps, e-sources, databases etc. All of these information sources are provided to the researcher by the various services of the library. There is a need for library services for a good research. Library services have an invaluable contribution in the whole process from the beginning of research to the end. Library services are needed to research topics such as social science, science and technology, human resources, cinematography, art etc. Library and research contributions are valuable in the development of society.

(2) The Importance of library services and Librarian in the research process.

1. Research Proposal

To research any topic, first thing is to gather literature related to it. These literatures are available in reference books, magazines, journals, inventories, documents, files, gazette, maps, e-sources, database in the library. Various research proposals available in the library, or study of related literature, get the knowledge of the proposal.

2. Explanation problem of Research

Research problems include information from research in books, reference books, journals, journals, inventions, information from research, information from the background, research objectives, research area, research type, exploration ideas, Document, file, gadget, maps, e-source, database form Are available. Research information can be obtained from it.

3. Related literature review

In relation to the literature related to the literature, the purpose of the review of the literature, the importance of the review of related literature, the review of the related literature, the theoretical review, practical reviews, the particulars of the presentations of the research, etc. The library's research books, reference books, encyclopedias etc.

4. Research Assistant

Information about library research books, reference books, journals, journals, documents, files, gazette, maps, e-mails, information from library to topic, background, sample selection, selection of research method, research device selection, information processing method, Source, database Apart from this, research done in the past is available from search conventions.

5. Analysis of research, interpretation and findings

This chapter of research is available for analyzing, interpretation of various books, books of SPPS software and related subject related disciplines.

Thus, the requirement of library services is in the majority of the work from choice of research to report writing.

(3) Role of Library Services and Librarian for Good Research

(i) Book Interchange Service

Book exchange is a service that is the most commonly used service in the library today. This can be called the main service of the library. Today the book exchange service can be given on the basis of Library Management Software. In

which book reservation facility is also available. Also, the user / researcher can send a message to the reminder e-mail or mobile to return the timely book in the library.

(ii) Reference Service

The reference service is provided personally by the library. Using the ICT, the reference texts can be used to provide a reference service to a user / researcher using a CD-ROM or a pdf format in the computer.

(iii) Advanced Speaking Service

The latest information related to that topic can be given to the researcher via the Internet or through an advanced information service by e-mail.

(iv) Selective information service

Selective information service can be provided using a computer as follows. Two files are created using the first computer. User profiles and document profiles, then both of these files are provided with the comparative selection information through the computer.

(v) Inter Library Loan Service

The document or books that are online in the computer's database or on the Internet can exchange books among the libraries. This is an internal service between the two libraries. For which ICT tools are needed. That is, we can ask the users by inviting them through inter-library loan service in the available documents or books in other libraries.

(vi) Representation service

The printing service is a duplication technique based service. By which a copy of the document is given to the users in the libraries. For which a copy can be obtained by scanning the Xerox machine or the printer connected to the computer.

(vii) Referral service

This service is referred to as a referral service directed to sources with relevant information if the library cannot provide required books or information to the students. In which referral resources can be a person, organization, information center. Which can be delivered quickly through ICT tools.

(viii) Guidance service

This service provided by the Internet is intended to help bridge the gap between the information source and the user's information. This type of service contains information about information or information about users' needs documents or resources.

(ix) Characteristics Service

The summary of the current published publications in this service or the relevant information about that article is given. Apart from this, his own document is summarized. Such services are given only by the special library.

(x) Online Information Service

An online service is searched online through Google or other search engines. The information that is received by the user is provided to the student through e-mail, WhatsApp or pendrive.

(xi) Database service

Today, many true libraries have an online or off-line database of different topics. Online database subscription can be filled out. Such a database is very expensive. These libraries can be obtained by the person who cannot afford to buy individually.

(xii) E-Resource Services

Today, e-books, e-journals, e-teases and e-resorts have become available in the online form. On the online search site, the e-journal of INFLIBNET WEB is available on the invention of the entire country's university. The subscription can be filled up. Similarly, search invoices and short search essays are available on the GLOBAL ETD WEB for countries around the world, some of which provide free services. The information required from these OPACs and Institutional Repository is also available. Apart from this, the necessary information can be obtained using different national and international library networks. Thus, library e-resource service researcher may be very useful.

(Xii) Mobile Based Service: This service are very important in Library . this service in Massages , WhatsApp and Alert tone service etc service in mobile based services in very use full users.

(4) Conclusion:

Thus, the requirement of library services is in the majority of the work from choice of research to report writing. The library can be well researched using search invoices, research papers, survey reports, progress reports, documentary information, government and private organization reports, journals, e-resources etc. As a result of the library's various services and information and communication technology, the library services speed and scarcity come into play. The direct benefit that a user or researcher finds. Thus, the role of library services is invaluable for good research. Role of librarian in better research work in this subject.
